

The pallet dispenser that nothing else stacks up against.

Introducing a safer, more efficient way to manage pallets.

With Rehrig Pacific's DStacker, you can do more by doing less. The world's only DC-powered pallet dispenser for filling applications, the DStacker streamlines your processes, improves productivity, reduces your pallet storage footprint, and - most importantly - eliminates work-related injuries caused by manually handling pallets.

The DStacker is the industry's safest pallet dispenser, featuring no motor and no PLC control. Plus, it is completely battery powered, so no power connection is required. It stores up to 50 pallets with its simple design that allows for a 2-hour installation. The DStacker can also be customized to your specs and your branding.

Save time, save space, and make work safer. It's that simple.

The DStacker was designed in partnership with QTEK Design

Key Features & Benefits:
